Profile Summary

Computer Science undergraduate at KL University with a CGPA of 9.6. Familiar with Python, Node.js, and full-stack web development concepts. Experience in building web applications using React, Spring Boot, and Node.js/Express, along with IoT-based monitoring systems. Interested in developing practical software solutions and continuously improving problem-solving skills.

Education

KL University (Koneru Lakshmaiah Education Foundation) Expected May 2028
Bachelor of Technology in Computer Science and Engineering CGPA: 9.6 / 10

Technical Skills

Programming Languages:	C, C++, Java, Python
Core Concepts:	Data Structures & Algorithms, Object-Oriented Programming Machine Learning Fundamentals
Web Development:	HTML, CSS, JavaScript, React.js, Full-Stack Development
Backend Development:	Spring Boot, Node.js / Express
Databases:	PostgreSQL, MongoDB
Tools & Platforms:	Git, GitHub, Figma
Cloud:	AWS Cloud Practitioner (Certified), Cloud Computing Fundamentals

Projects

Learning Management System *React, Spring Boot, PostgreSQL*

- Contributed to a full-stack Learning Management System supporting course creation, enrollment, and assignment management.
- Assisted in developing RESTful APIs using Spring Boot and integrating them with a React frontend.
- Designed PostgreSQL database schemas to efficiently manage users, courses, and learning resources in a scalable system.

Local Skilled Worker Marketplace *Next.js, Node.js/Express, MongoDB*

- Built a full-stack marketplace connecting customers with local skilled workers through a searchable directory and profile listings.
- Designed a semi-verified insight layer surfacing response time, on-time rate, and price consistency to help users evaluate worker reliability.
- Implemented JWT-based authentication and RESTful APIs with Node.js/Express, using MongoDB for flexible, schema-light data storage; deployed the frontend on Vercel and backend on Railway.

Smart Public Toilet Management System *Arduino, MQ-2 Sensor, ESP Module*

- Developed an IoT-based monitoring system to detect ammonia levels in real time using MQ-2 sensors.
- Automated door control using ultrasonic sensors based on occupancy detection logic.
- Integrated ESP module to trigger SMS alerts when ammonia levels exceeded safe thresholds.

Certifications

- GitHub Copilot Certification
- NPTEL Certification – Artificial Intelligence and Machine Learning
- AWS Cloud Practitioner Certification

Leadership & Activities

UX Design Club Member — KL University

- Designed UI prototypes using Figma and collaborated with team members on frontend design projects.

Technical Presentations & Discussions

- Participated in project discussions and technical presentations, strengthening communication and teamwork skills essential for software engineering roles.
